

M.B.A. Programmes

in the streams of:

- Engineering and Technology Management
- IT Enabled Services Management

The M.B.A programme endeavors to create manpower who have scientific and engineering approach to business administration. The programme which is offered exclusively for engineers equips them with the necessary business and management skills required to run an organization successfully. As the world of technology continues to change relentlessly spiraling upwards, rapid changes in various pioneering areas concerning Engineering & Technology are inevitable and are being observed by one and all. Career (advancement) opportunities are awaiting those who are successful in managing the changes applicable to their typical business / organizational set-up.

M.B.A. programme in Engineering & Technology is specifically designed for working professionals who are associated with Engineering industries pertaining to core areas in Civil, Mechanical, Chemical, Petroleum, Biotechnology, Electrical, Electronics, Instrumentation, etc. M.B.A. in IT Enabled Services Management is specifically designed for those working professionals who are associated with IT enabled services offered by various engineering, computer and software industries.

The curriculum for the M.B.A. programme comprises of a set of about 15 to 20 named courses which are fundamental to a general management programme along with elective courses related to the respective streams.
